Wanting to seacall to upgrade your browsing experience, may visit after a short delay. Thank you for visiting my site and enjoy your stay! Q: Gradle - Task executor is not using all cores When running gradle for my android project, the task executor is only using 2 cores. In my build.gradle I have the following: task test { parallelExecution in Test } class Test extends Plugin { def afterEvaluate(Project project) { project.tasks.test.parallelExecution.numCores = 4 } } There are 8 cores in my computer. My test class has a loop that creates lots of tasks. When I run it locally it runs in parallel and uses all the cores. But when I run it on the servers it only uses 2. Is this a bug in Android Studio? When I run 'gradle -i' I get the following: :test:compileDebugJavaWithJavac :test: 82157476af
